

- Problems with your Electrical Switchboards?
- Problems with obsolete ACBs / Breakers in your Switchboards?
- Terasaki can offer you a Solution today – Retrofit!

“TEMPOWER 2” ACBs

It is of compact and versatile design. It can be used to replace existing ACB's in almost any switchboards, whilst retaining original copperwork and steelwork

TemPower

AGEING SWITCHGEARS

Many ageing breakers do not achieve the current regulatory disconnection time, even if regularly serviced or overhauled. The only way to achieve these protection levels is to fit new ACB into a system either by retrofitting or completely replacing the old ACB.

BLACKOUT TIME

Terasaki understands that most installations cannot cope with the cost and disruption of panel replacement or the lengthy shut downs with "hardwired" retrofit solutions.

- **REDUCE BLACKOUT TIME**
- **REDUCE COSTS**
- **IMPROVE SAFETY**
- **EXTEND LIFESPAN OF SWITCHBOARDS**

Terasaki have developed retrofit kits using TEMPOWER2 which can replace ACB's of:

- Terasaki
- GEC
- Ottermill
- Merlin Gerin,
- Westinghouse
- Mitsubishi
- Siemens
- ABB
- others
